Teacher notes:

*Woodlouse - 14 legs

*Stick in label and print off completed branch diagrams to go in books.

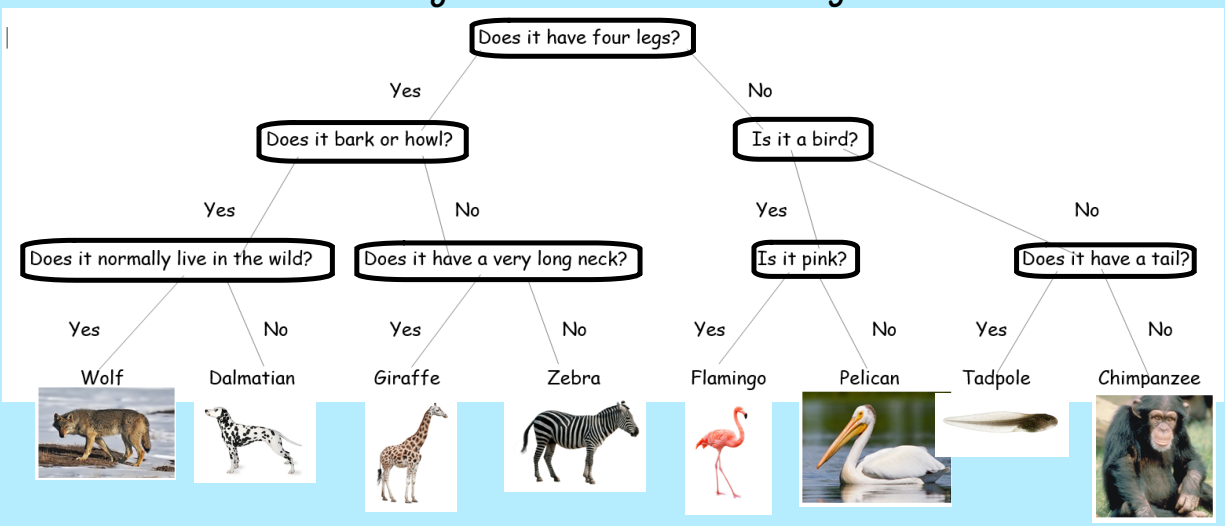

*Set up laptops (1 between 2)

*Search for 'jit5' on Google or go to www.j2e.com/jit5 on each laptop.

*Click on 'branch' at the top right.

Today we are learning to make a branch diagram!

Have you seen one before?

A branch diagram helps us sort and categorise.

What have we been learning about this week?

How could we make a branch diagram?

Can you put the minibeasts into the branch diagram in the right place?

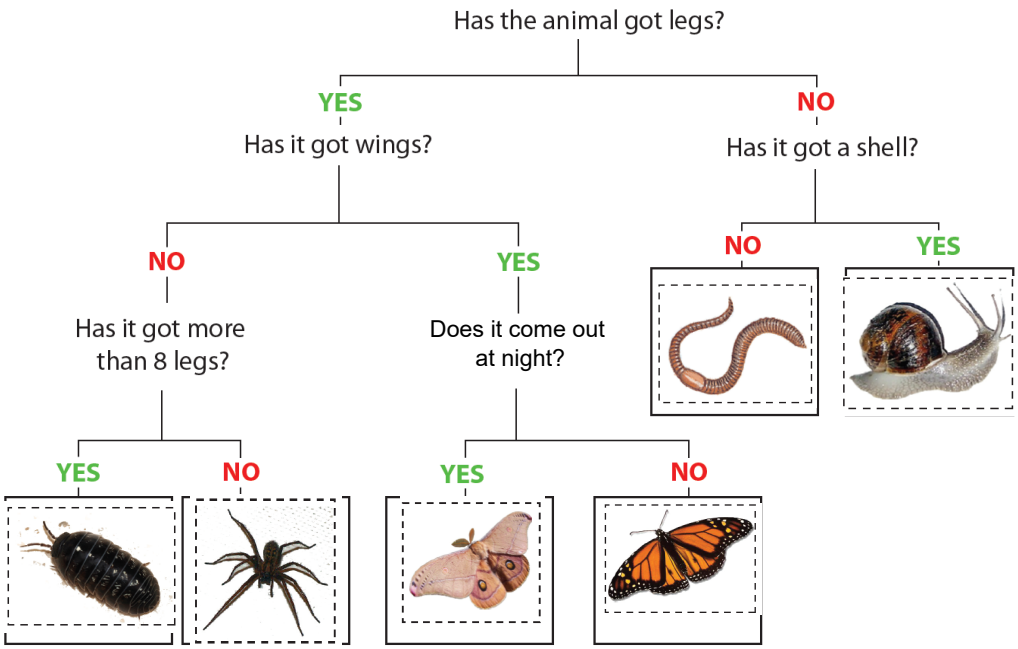

Were you right?

Let's make a bank of questions for our branch diagrams.

Does is have legs?

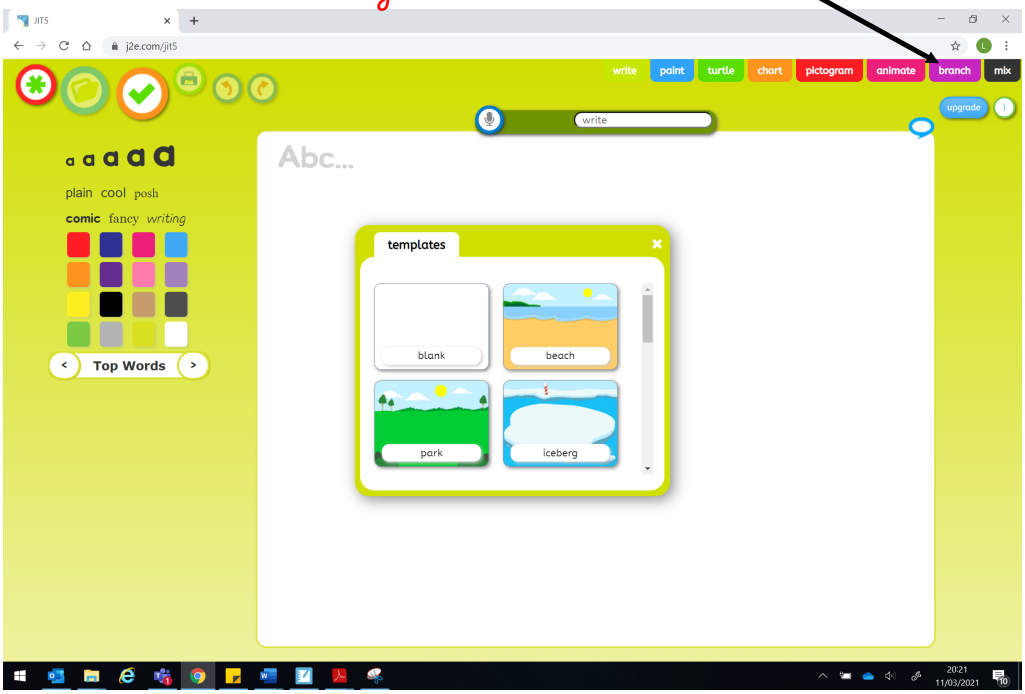

Does it come out at night?

Does it come from a cocoon?

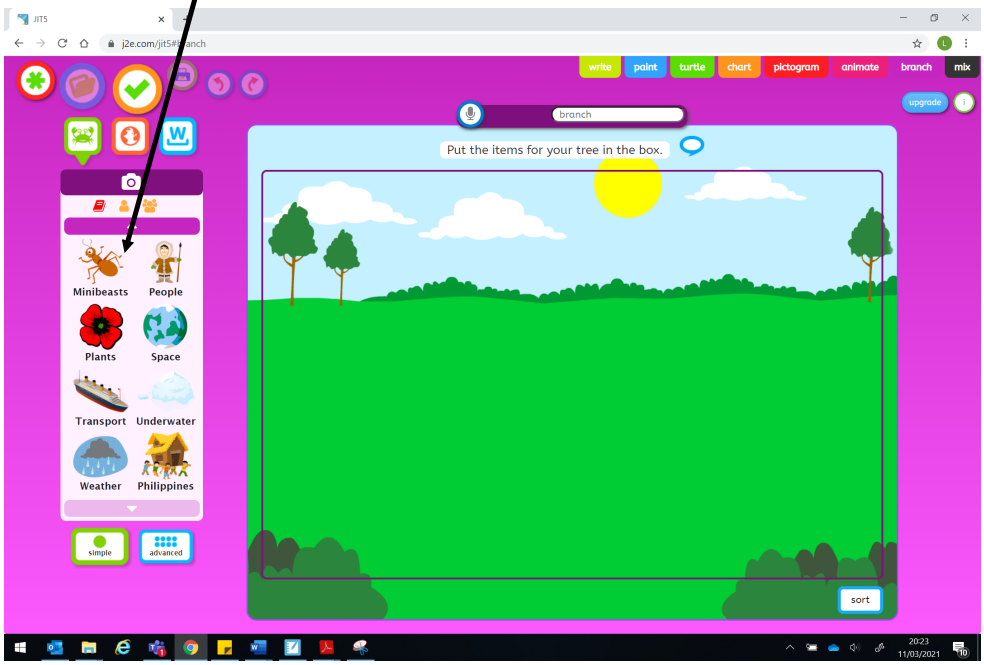

Today we are using Just 2 Easy to make our branch diagram

https://www.j2e.com/jit5#branch

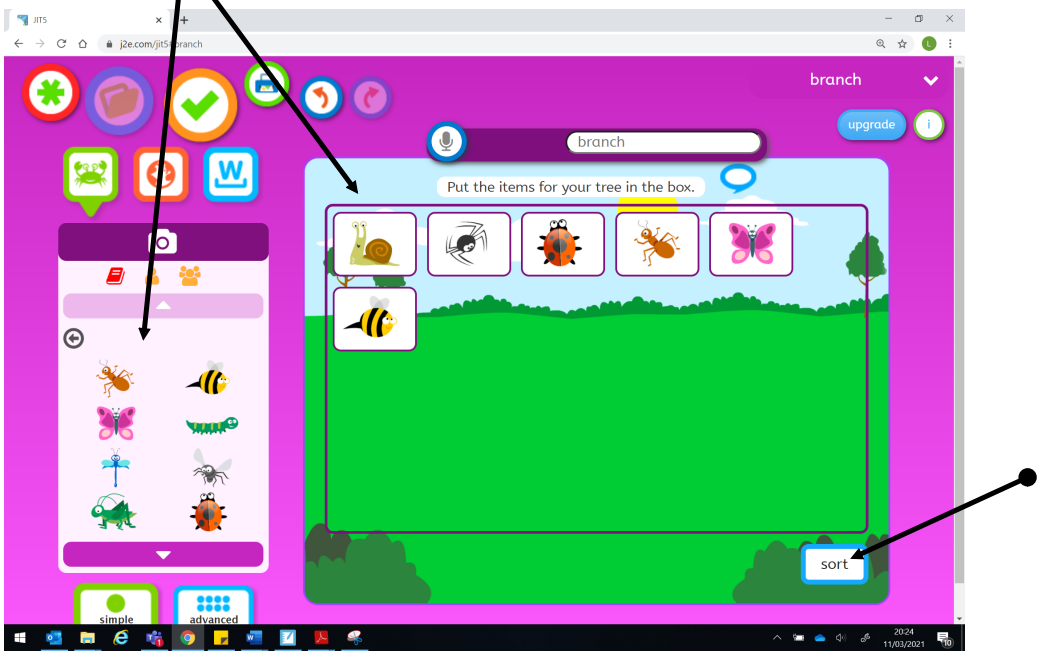

Click on branch and choose the park background.

Choose 'minibeasts' from the picture menu

Click and drag six minibeasts for your branch diagram (it's called a tree on J2E). Then click sort.

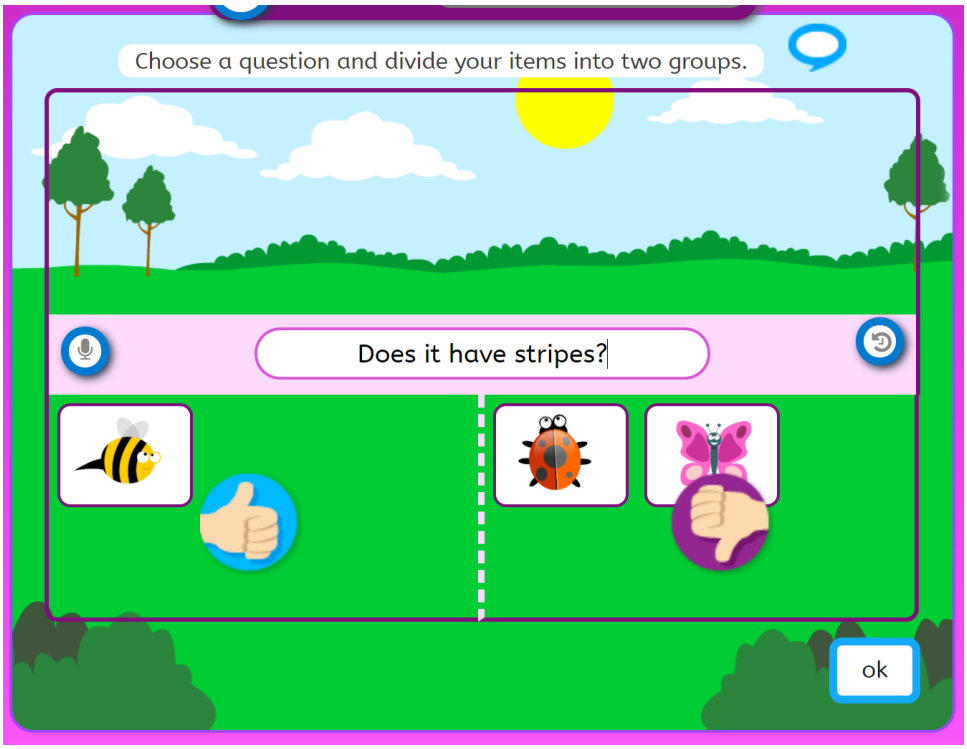

Type a question into the box and sort the minibeasts into yes and no groups.

To type a question mark hold down Shift and the ? button.

Continue typing questions and sorting the minibeasts

Finally you will make a branch diagram - Make sure you print!

Extension - Create a bigger branch diagram using ten minibeasts!
