

We are learning to design and make a bag.

What material is used to make the bags we use for our shopping? Is it the best option? Listen to my story to see if you change your mind.

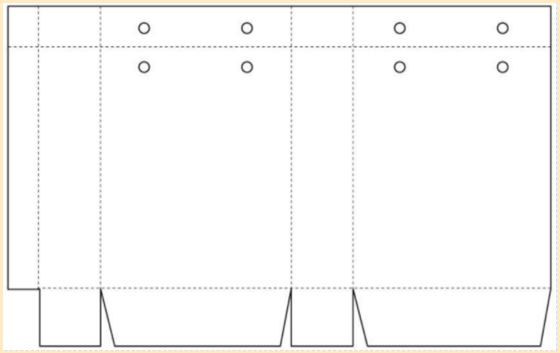

Can you remember any reusable or recyclable materials we could use for our bag?

Can you think of any good reasons for using these materials to make a bag? Any bad reasons?

	It would be good to make a bag because... 	It would be bad to make a bag because... 
Tin foil		
Tissue Paper		
Card		

Using our design ideas from Friday we are going to make a bag using card.

Watch how I cut and fold. How can we join the card together?

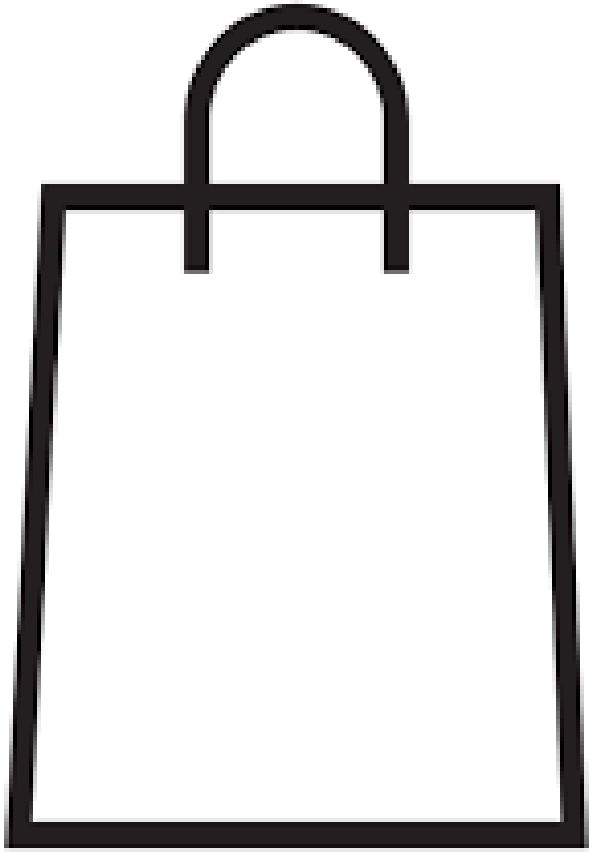

Our handles need to be strong! How can we strengthen the material of our handles?

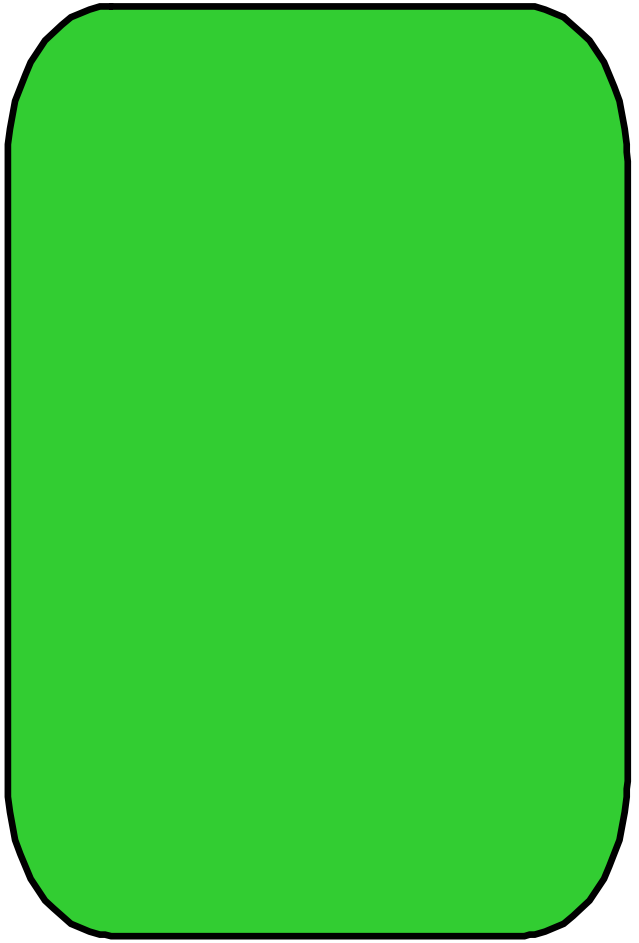

How could we join them onto our bags?

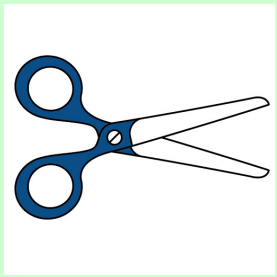

Our bags need to look attractive! How could we make them look better?

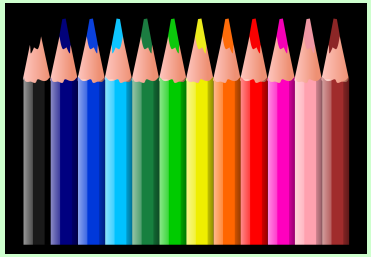

Now it's your turn!

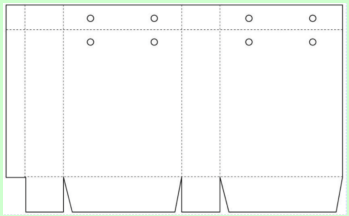

1. Cut out your bag.

2. Draw your designs onto your bag (you could use a repeated pattern).

3. Fold and join your bag together.

4. Attach your handles, making sure they are strong!
