
We are learning about mixing colours

Quick fire colours!

How many colours can we name in 30 seconds?

Let's remind ourselves about....

and how we can create different tints and shades.

An Artist's Palette

An artist will use a palette to mix the colours they need for their art.

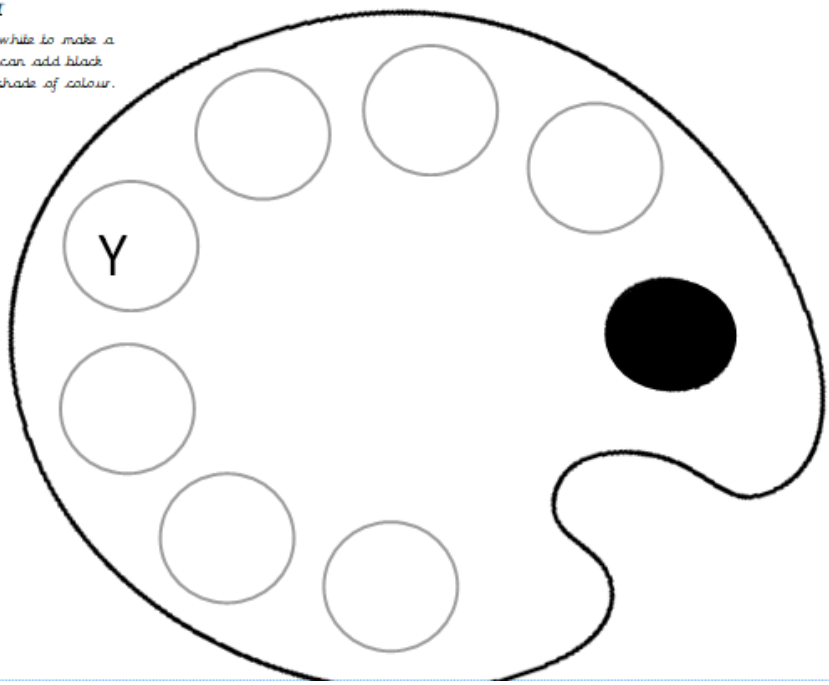

Today we are going to create our own palette using paint.

Let's do one together!

17.1.22 ART

I can add white to make a tint, and I can add black to make a shade of colour.

Now it's your turn:

- Start by adding yellow to the space with Y in
- carefully mix a little white into you yellow and paint in the space next to Y
- carefully add a little more white to make a new tint. Paint in the space. Repeat one more time.
- Next start with your yellow starting colour again, this time add a little black and paint the space on the other side of the Y.
- Repeat for the next 2 spaces, adding more black to make a darker shade.

Plenary:

Share your palette's.
Can you think of names for your yellow tints and shades?
